

# Brink Home

Remote control for the occupant

Increasingly, occupants feel the need to be able to remotely control their home systems. Turning down the ventilation from the car because they forgot to do so when they left in a hurry. Or noticing from the office that something is wrong and directly calling the technician to quickly remedy the fault. You can, with Brink Home. Brink Home makes it possible to control and read out the ventilation system from anywhere in the world using a smart phone, tablet or PC.

## Optimum use

Brink Home lets occupants use the home climate system more easily and more consciously. The ventilation system is activated on demand and when it is needed. That way there is always sufficient fresh air in the home. That is not only comfortable, but also healthy. And sustainable, because the system is used more efficiently. As a bonus, occupants save energy costs.

## Everything remote

The intranet or a local network gives the occupant remote access by smart phone, tablet or PC to the ventilation system in his home. The system operates fully automatically. The occupant may also control certain functions:

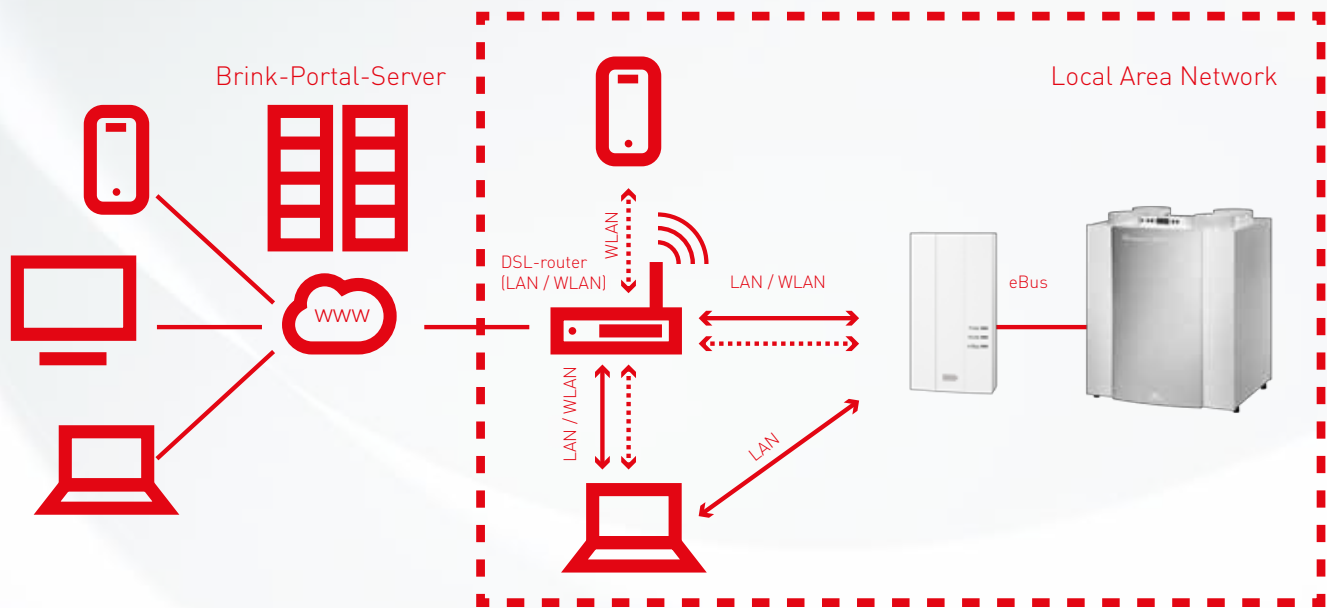

- Setting the ventilation mode (holiday, absent, present, cooking/showering)
- Switching the ventilation mode holiday on or off
- Programming the ventilation mode through the optional timer control module Air Control

Subsequently, the occupant's PC or app displays:

- The measured CO<sub>2</sub> percentage in the home
- Extra ventilation under demand control of the RH sensor active yes or no
- In which zone(s) the 2-zone demand control is active
- Bypass active yes or no
- A message when filters have to be cleaned/replaced
- Possible fault

## Efficient service

Brink Home can excellently be used for service. The occupant can see on the PC or app whether there is any fault or whether maintenance is needed. The occupant can then directly transmit the error message to his installer and give him permission for remote access to see what is wrong. As far as possible, the installer provides remote help. If repairs are necessary, the installer can in many cases directly see what causes the fault and make sure he has the necessary part with him on his visit. That makes an additional call unnecessary and it is more efficient for the occupant as well.

### Brink Home Module and App

Brink Home is composed of the Brink Home Module and the Brink Home App that are connected with the Renovent and may be equipped with the timer control module Air Control. The Brink appliances of the Renovent series are then accessible through a (W)LAN router or the Brink Portal Server. The Brink Home App for smartphone and tablet is available for Android and iOS.

Brink Home Module

### The advantages at a glance

- Ease and comfort for the occupant
- Remote control
- Optimum use of system capabilities
- Energy costs savings
- Easy to install
- Service-friendly

### Availability

Brink Home will be available late 2015. From then on, the complete climate system can be controlled through one intelligent system.
